

Exercise: BFS and UCS

Path finding from S to G

- What is the solution using BFS?
 - $S \rightarrow X \rightarrow Y \rightarrow V \rightarrow G$ *cost=14*
 - $S \rightarrow X \rightarrow Y \rightarrow Z \rightarrow W \rightarrow G$ *cost=13*
 - $S \rightarrow G$ ✓ *cost=12*
 - $S \rightarrow P \rightarrow Q \rightarrow G$ *cost=11*
- Is BFS cost-optimal in this example? **No**
- What is the solution using uniform-cost search (UCS)?
 - $S \rightarrow X \rightarrow Y \rightarrow V \rightarrow G$
 - $S \rightarrow X \rightarrow Y \rightarrow Z \rightarrow W \rightarrow G$
 - $S \rightarrow G$
 - $S \rightarrow P \rightarrow Q \rightarrow G$ ✓
- Is uniform-cost search (UCS) cost-optimal? **Yes**

Backtracking with Forward Checking: Exercise

- Variables: $\mathcal{X} = \{V_1, V_2, V_3\}$.
- Domains: $\mathcal{D}_1 = \{R, G, B\}$, $\mathcal{D}_2 = \{R, G\}$, $\mathcal{D}_3 = \{R, G\}$.
- Constraints: adjacent variables must have different colors.

step 1: assign $V_1 = R$

step 2: forward checking

step 3: assign $V_2 = G$

step 4: forward checking

$\mathcal{D}_3 = \emptyset$, terminate.

Backtracking with Forward Checking: Exercise

- Variables: $\mathcal{X} = \{V_1, V_2, V_3\}$.
- Domains: $\mathcal{D}_1 = \{R, G, B\}$, $\mathcal{D}_2 = \{R, G\}$, $\mathcal{D}_3 = \{R, G\}$.
- Constraints: adjacent variables must have different colors.

step 5: assign $V_1 = G$

step 6: forward checking

step 7: assign $V_1 = G$

step 8: forward checking

$\mathcal{D}_3 = \emptyset$, terminate.

Backtracking with Forward Checking: Exercise

- Variables: $\mathcal{X} = \{V_1, V_2, V_3\}$.
- Domains: $\mathcal{D}_1 = \{R, G, B\}$, $\mathcal{D}_2 = \{R, G\}$, $\mathcal{D}_3 = \{R, G\}$.
- Constraints: adjacent variables must have different colors.

step 9: assign $V_1 = B$

step 10: forward checking

step 11: assign $V_2 = R$

step 12: forward checking

Backtracking with Forward Checking: Exercise

- Variables: $\mathcal{X} = \{V_1, V_2, V_3\}$.
- Domains: $\mathcal{D}_1 = \{\text{R}, \text{G}, \text{B}\}$, $\mathcal{D}_2 = \{\text{R}, \text{G}\}$, $\mathcal{D}_3 = \{\text{R}, \text{G}\}$.
- Constraints: adjacent variables must have different colors.

step 13: assign $V_3 = \text{G}$

Solution found: $\{V_1:\text{B}, V_2:\text{R}, V_3:\text{G}\}$

Backtracking with Forward Checking: Exercise

In Australian map coloring problem, can we assign $WA=red$, $Q=green$, and $V=blue$?
Apply forward checking and show the steps.

	<i>WA</i>	<i>NT</i>	<i>Q</i>	<i>NSW</i>	<i>V</i>	<i>SA</i>	<i>T</i>	
Initial domains	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>
After <i>WA</i> =red	<div><div></div></div>	<div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>
After <i>Q</i> =green	<div><div></div></div>	<div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>
After <i>V</i> =blue	<div><div></div></div>	<div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>

$\mathcal{D}_{SA} = \emptyset$, we cannot have such an assignment.
